

Haketilo - Bug #116

[MOZILLA] injecting a script causes mojibake

03/07/2022 11:00 AM - kozzko

Description

On some websites injecting a payload results page's content being incorrectly decoded as latin1.

This was observed on Google Forms and most recently reproduced with LibreWolf 97. Unfortunately, I currently have no non-private form with non-latin characters to share.

Interestingly, the problem does not occur on every page. For example, <https://koczko.org> displays unicode characters properly even when payload is used (the <script> prepended to the document in background/stream_filter.js causes Quirks Mode but this is a different issue)

History

#1 - 03/09/2022 07:10 PM - kozzko

I just confirmed the issue doesn't exist on Chromium 90

#2 - 03/25/2022 10:57 AM - kozzko

- % Done changed from 0 to 100

- Status changed from New to Closed

Fixed in 1.0-beta3
