Target version:			
Description			
When defining a script to inject to pages, it is possible to provide a URL to download it from instead of the actual text contents of the script. It would be good to be able to provide additional URLs in case the first one doesn't work. This will have to include both enhancement to the settings page and edits to background/page_actions_server.js .

- Status changed from New to Rejected

Once we implement the new scripts/bags/pages schema, it'll be more convenient (and more in line with Haketilo's general direction) to only support loading locally-stored scripts, which makes this issue irrelevant.
